CS 290 - Spring 2018

Final Project Proposal

For my final project I will be creating a travel blog. This is something I've wanted to get started for a long time, so I am excited to get an opportunity to bring the idea to life.

Per the requirements, there will be a horizontal menu bar to navigate between the pages. This bar will appear at the top of every page.

The homepage contains a picture carousal animation, as well as a scroll box and a button to download my resume. In addition, you can find links to my online profiles (LinkedIn, GitHub, email, Yelp, Facebook) at the bottom of the homepage.

The Amsterdam subpage contains several unordered lists of my recommendations for things to do in Amsterdam. Because I just couldn't resist, this page has a carousel picture animation as well!

The remaining subpages (Flights, Airports, Airlines, Destinations, Countries) are related to my final project for CS340. Each of those pages corresponds to a database table. On each page the user will be able to search the table and add or remove entries.

Each page will have the same layout. I will have a blue horizontal navigation bar at the top, with a green hover and current page indicator. The background of the rest of the page will be a dark grey and text will be white. All content on the page excluding the menu will be enclosed in a 900px div container to keep the page centered. Buttons are blue with a green hover, and the input fields on the database table pages are designed to look nice and modern.
